

## Using NetExtender or Sonicwall Mobile Connect to establish a secure VPN connection.

For those that have a company-provided laptop or Macbook, you have the option to use an SSLVPN client, NetExtender, or Sonicwall Mobile Connect.

### FOR WINDOWS USERS: To use NetExtender, follow these steps:

- Please retrieve the appropriate version: [Download NetExtender Here](#)
- After installing NetExtender, launch the app, and enter your credentials as follows:

The screenshot shows the NetExtender application window. The title bar reads "NetExtender". Below the title bar, the SonicWall logo and "NetExtender" are displayed. The main content area contains a login form with the following fields:

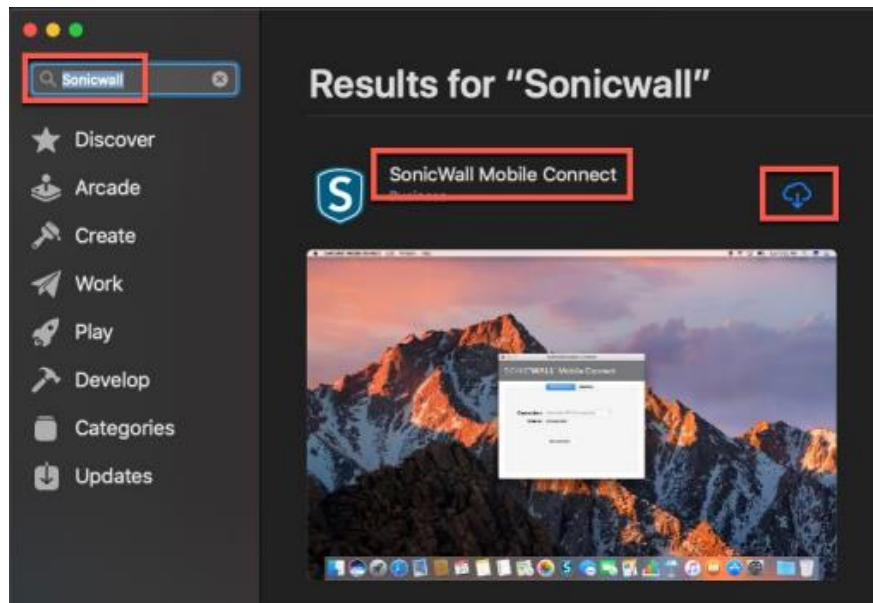

- Server:
- Username:
- Password:
- Domain:

Below the form is a "Connect" button. At the bottom of the window, there is a checkbox labeled "Save user name only if server allows" and a copyright notice "© 2015 SonicWall Inc." in the bottom right corner.

- Click **Connect**, and you will be connected shortly thereafter with access to everything you would have access to when using your laptop in the office (apps/fileshares/etc).

## FOR MAC USERS: To use Sonicwall Mobile Connect, follow these steps:

- Search for Sonicwall in the App Store

- Open the app and click on "Add Connection"

- Enter in Name and Server, then click **Next**

- You can skip the username/password (or fill in just the username). Make sure the domain is your company domain, then click **Save**.

- Click **Allow** when it asks to allow SonicWall Mobile Connect to make changes

- If you **DO NOT** know your **Sonicwall NetExtender** or **Sonicwall Mobile Connect** credentials (Server, Domain, Username, Password) OR you **DO NOT** have SSLVPN configured on your machine, please work with your organization's primary technical contact to obtain licenses and request support.
